Make Your Own Science News Update

1. **Choose** your topic.

   What makes you curious? What do you get excited about? Pick a topic or science news story you'd like to explore and share with other people!

2. **Find a focus.**

   Your report can't cover everything, so decide what you'd like to focus on. Maybe there's a question you'd like to answer?

3. **Carry out research.**

   What do you need to create your report? Use the internet, books, and magazines to gather information. You could even interview an expert on your topic.

4. **Think about content.**

   What key points do you want to cover? What would you like people to learn?

5. **Think about structure.**

   How will you start your report to get people interested? Make sure it also has a middle and an ending.

6. **Write** your report.

   Use the **News Update Template** to create your report. You can write on the lines and draw illustrations or paste images in the boxes.

7. Optional: **Present** your report!

   You could share your report with your classmates, friends or family. Why not...

   - Hand out copies of your report, or...
   - Read aloud the written report and display any visuals, or...
   - Make a recording (video or audio) of you presenting your report.
